PPM Drawing Assignment Notes

- **Makefile** must build `ppm_menu`, not `ppm_image`.
- **Makefile** default target must *not* include a target that runs your program.
- `main()` in `ppm_menu.cpp` must call `imageMenu()`, and nothing else.
- Latest code must be committed and pushed in git.
- The `src/` directory must directly contain your files: `Makefile`, `image_menu.h`, `image_menu.cpp`, `PPM.h`, `PPM.cpp`, and `ppm_menu.cpp`. *Not* in a sub-directory. Each assignment *adds* to the source.
