CS/WEB 4000: Dynamic Web Development

Assignment: Forms

Requirements

- Create an HTML form that submits to a PHP script which captures the data submitted by the form and displays it.

- In addition to displaying the data on the page, use the form data to construct and send an email message. Use the `mail()` function provided by PHP. Send an HTML message that looks clean and professional in the recipient’s mail client.

- Practice using PHP sessions by using one or more session values to display something meaningful across page views. Have fun and do something creative.

- Make your site look professional and presentable. Use valid HTML and CSS to structure and style your pages.

Resources

- Refer to the [PHP documentation](https://www.php.net/manual/en/) as needed when completing your assignment.

Submission

- Show your completed assignment to the instructor during class or office hours to receive credit.
