CS 4320: Machine Learning

Final Project

Choose a machine learning task. This could be an extension of a previous assignment, a new data set, a new or updated model, or algorithm. Select the data, prepare the data, select a model structure, select the training algorithm. Train using appropriate techniques.

Create a presentation that contains information about your project, and metrics regarding the quality of the resulting model. During the final exam period, you will have about 7 minutes to present your results.
