

Extra Fonts in Adobe on OS X (Spring 2014)

If you need to add fonts to the Adobe software on the OS X (Macs) in the CIT network, you can do it using these steps:

Add Fonts to Adobe

- Open a new Finder window
- At the top of the screen click on Go
- Hold down the Option key to show `Library`
- Open the Application Support folder
- Open the Adobe folder
- Open the Fonts folder
- The Fonts folder is where you can place any font file(s) you want to use.

The font(s) will now be available to the Adobe Creative Suite. You may have to restart the application you were using to use the new font(s), but generally you won't need to.
