**Linux History and Use**

Your task is to write a 1-2 page paper on Linux. Use Arial 10 font, double spaced. Source your material through the Works Cited feature of Microsoft Word. Three or four sources is sufficient.

In particular, you should answer the following:

- Can you find any devices that you use daily that might run Linux?
- Why should we care about Linux?
- How is it different than other operating systems?
- Find a piece of software that you traditionally use and see if there are any open-source alternatives. Read about it, demo it if you can. What operating systems will it run on? What do you think about it? (You need not run it on Linux if you are choosing to run it.)
  - Many ideas can be found [here](#).
- Why hasn’t it taken the world by storm?
