Hop into your browser and surf into the wiki directory. It'll direct you into the config script. Fill out the form... remember you're probably not on an encrypted connection.
Gaaah! :)

If all goes well, you should soon be told that it's set up your wiki database and generated a configuration file. There is now a copy of "LocalSettings.php" available to download from the installer. Download this now, there is not a way (yet) to get it after you exit the installer. Place it in the main wiki directory, and the wiki should now be working.

Once the wiki is set up, you should remove the mw-config directory (though it will refuse to config again if the wiki is set up).

----

Don't forget that this is free software under development! Chances are good there's a crucial step that hasn't made it into the documentation. You should probably sign up for the MediaWiki developers' mailing list; you can ask for help (please provide enough information to work with, and preferably be aware of what you're doing!) and keep track of major changes to the software, including
MediaWiki 1.21.2

LocalSettings.php not found.

Please set up the wiki first.
A few of the configuration/setup screens will be shown.
**Database type:**
- MySQL

**MySQL settings**

**Database host:**
- `database.dsutux.us`

**Identify this wiki**

**Database name:**
- `pineapple_wiki`
Added database and user with privileges to the database
MediaWiki 1.21.2 installation

Complete!

Congratulations, you have successfully installed MediaWiki!

- Language
- Existing wiki
- Welcome to MediaWiki!
- Connect to database
- Upgrade existing installation
- Database settings
Main Page

MediaWiki has been successfully installed.

Consult the User’s Guide for information on using the wiki software.

Getting started

- Configuration settings list
- MediaWiki FAQ
- MediaWiki release mailing list
- Localise MediaWiki for your language

This page was last modified on 16 October 2013, at 18:15.
To complete this, the wiki needs to be customized, and used to be tested.
