IT 3110: Systems Automation

Shell Scripting

Assignment

This assignment will hone your skills as a Bash shell programmer.

Tasks

Create the following scripts:

1. A script called `add_user_all.sh`. This script will ssh to all of your Linux machines and create a new user on each. The script should receive the user via command-line argument and create that user on all your Linux machines. Example usage:

   ```bash
   ./add_user_all.sh tommy
   ```

Report

Take a print screen of your scripts running. Also upload your scripts.

Submission

- Submit your report and images to the [SCRIPT I](https://canvas.instructure.com) assignment in the Canvas.
