Assignment

This assignment will hone your skills as a Bash shell programmer.

Tasks

Write a script that will do the following (each of the following should be placed in a separate function):

- present a menu to the user:
  - If the user selects option 1, your script should randomly display a quote from this page.
  - If the user selects option 2, your script should prompt the user for integers until they enter \( \texttt{Control+d} \). Then it will sum up the integers and display the total to the user.
  - If the user selects option 3 your system will display the users that have been logged in for a day or more on \( \texttt{ssh.cs.dixie.edu} \).
  - Option 4 will quit the script
- Any other option will display an error message to the user and redisplay the menu.

Report

This can be passed off in class, or Take a print screen of your scripts running. Also upload your scripts.

Submission

- Submit your report and images to the \texttt{SCRIPT 5} assignment in the Canvas
