**Xen Pool**

Install another instance of Xenserver on the Dell machine issued to you. See the *equipment* list for your assignment. The dell machines have been assigned a letter.

Make sure that this new node is added to your pool.

Make sure that this node is connected to the same ISCSI or NFS storage repository as the other nodes in your pool.

Make sure that a vm can migrate freely to each node in the pool.

**To pass off**

Demonstrate you can migrate a machine to any node in your pool.
