**Server hardware**

- One or more 64-bit x86 CPU(s)
- VZ technology should be enabled in the Bios
- Min 2GB mem, 4G for prod (Dom0)
- 16 GB min hd (Dom0)

**XenCenter**

You manage your systems with this Windows-only application. There is an [openxenmanager](http://openxenmanager.com) that runs on linux, but doesn’t quite have the full functionality of this windows counterpart.

**Virtual Machine Install**

First we need to have access to iso’s in order to install virtual machines. I have already set up an iso repository.
