

# Users

## ***Creating a tablespace (Place to store tables within the database)***

First one must create a place (File Folder) to store the users or company data.

```
SQL> create tablespace ts_name;
```

## ***Creating a User***

Then create a user and give them access to login (create session) to Oracle and space to store data (unlimited tablespace)

```
SQL> create user user identified by password default tablespace ts_name;  
SQL> grant create session to user;  
SQL> grant create table to user;  
SQL> grant unlimited tablespace to user;  
SQL> exit
```

## ***Importing the books database***

```
LINUX> cd  
LINUX> cd sql_files  
LINUX> sqlplus (user = user pass = password)  
SQL> @books_oracle.sql  
SQL> exit
```
