CS/WEB 4000: Dynamic Web Development

Assignment: Databases

Requirements

- Create at least one table in a MySQL database. The table should include an integer primary key field named `id` and at least three other fields. Try to use a variety of field types.

- Create an HTML form that submits to a PHP script which captures the data submitted by the form and displays it on the page.

- In addition to displaying the data on the page, insert the data into your MySQL database table so that it will be saved for future use.

- Create another PHP page that displays all records within your database table in a meaningful way.

- Make your site look professional and presentable. Use valid HTML and CSS to structure and style your pages.

Resources

- Refer to the [PHP documentation](https://www.php.net) as needed when completing your assignment.

Submission

- Show your completed assignment to the instructor during class or office hours to receive credit.
