CS/WEB 4000: Dynamic Web Development

Assignment: Validations

Requirements

- Add server-side validation to at least two different forms within your application.
- Validate three or more fields for each of the two different forms.
- Use at least two different types of validation (e.g. presence, format, numerical, confirmation).
- If a form is submitted and fails validation, redisplay the form with specific error messages displayed above the form. Or, optionally, display the error messages inline, next to their respective fields.
- When redisplaying a form after it fails validation, pre-fill the form with any previously-entered data.

Resources

- Refer to the PHP documentation as needed when completing your assignment.

Submission

- Show your completed assignment to the instructor during class or office hours to receive credit.
