Docker Bind Mounts and More

Description

Run the following docker command:

```bash
docker run -dp 80:80 docker/getting-started:pwd
```

You should visit port 80 to see the instructions for the Docker 101 tutorial. This tutorial will help you practice several things that we have only discussed but not yet practiced: bind mounts, docker hub. You should have already completed up to “Sharing our App”. Now start from “Persisting our DB” and continue to the end.

To Pass off

Zip up your project directory and upload.
